

# Eastway Technical Consultants Ltd.

*Professionals in Condition Monitoring*

Eastway Technical Consultants Ltd are the Country Distributors for GM Tech/ IRISS, manufacturers of the VPF ® range of IR Windows.

## Seeing Is Believing

**The FIRST**

**Lloyds Type Approved**

**IR Inspection Window in  
the World**

Infrared (IR) Thermography is a proven, well-tested, safe and efficient method of checking the serviceability of electrical components. The inspections need to be carried out on 'live' components to accurately assess the equipment condition.

In order to access the equipment, fixed covers will have to be removed. However this is not always possible due to switched interlocks and/ or in-house health and safety regulations.

The installation of IR viewing ports, or more commonly known as IR Inspection Windows, would eliminate these issues. IR Windows allow the inspection of 'live' components to be carried out safely without having to remove or open the panel door. This also reduces the manpower needed to remove panel covers before or during the inspection.

Hence Thermal Imaging electrical inspections become easier, faster, safer and more cost effective.
